Date: 03-AUG-2021

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

On protocol 19-109, amendment B, dated October 24, 2019, it is stipulated that a board certified veterinary pathologist will be directly involved with necropsies on moribund or found dead animals. On 31 October 2019, a monkey on this protocol was found dead, and no board certified pathologist was involved with the necropsy, although a trained facility technician did perform a gross necropsy. Per the IACUC meeting minutes from November 2019, the technician did not notify a board certified pathologist to be involved in the necropsy. The IACUC must review and approve any modifications to ongoing activities on the approved protocol. The registrant shall ensure that changes to activities conducted on the protocol are approved.

Correct from this date forward.

3.77(f)

Sheltered housing facilities.

Sheltered housing facilities for non-human primates have a perimeter fence that is less than three feet away from the ends of outdoor portion of animal enclosures. The runs at the end of each row contact the perimeter fence, creating an area where non-human primates and wildlife could potentially have contact though an approximately 16 inch gap at the corners.

Inspection Report

Outdoor sheltered housing for non-human primates must be enclosed by a fence that is constructed and maintained so as to prevent the entry of unauthorized people or animals and is of sufficient distance from the animals' primary enclosures to prevent close contact between animals inside the enclosure and outside the perimeter fence. Failure to meet these requirements could result in contact with wildlife, which could transmit disease or otherwise harm the non-human primates. The facility shall ensure that the perimeter fence adequately protects the animals.

To be corrected by 9/10/2021.

This inspection was conducted on site on 8/3, 8/4, and 8/5/2021, with a final exit interview conducted remotely with facility representatives on 8/10/2021.
