Type: ROUTINE INSPECTION
Date: 02-DEC-2014

3.1(c)(1)(1) REPEAT

HOUSING FACILITIES, GENERAL.

In the building housing the large breed dogs, one enclosure, affecting one dog, has sides constructed of metal bars that are showing excessive rusting. The rust causes flaking and pitting of the metal and does not allow for proper cleaning and sanitization of these metal bars. All rusty metal must be replaced or altered in a manner that allows for it to be properly cleaned and sanitized every two weeks.

3.6(a)(2)(1) REPEAT

PRIMARY ENCLOSURES.

In the building housing English Bulldogs, the enclosures are constructed of wire floors and wire sides. Three enclosures, affecting three dogs, had wires on their sides that are broken and creating sharp points at the level of the dogs. Sharp points pose an injury risk to the dogs. All sharp points must be removed or altered in a manner that eliminates the injury risk towards the dogs and licensee must establish a maintenance plan for the enclosures to ensure they remain safe for the dogs. The licensee removed all broken wires and sharp points from the enclosures during the inspection.

3.9(b) REPEAT

FEEDING.

In the first room of the building housing English Bulldogs, eight metal self feeders, affecting eight dogs, have a buildup of dirt and grime on them. Food receptacles must be kept clean in order to prevent food contamination and protect the health of the animals. Licensee must ensure that all food receptacles are cleaned and sanitized every two weeks or as often as necessary, to prevent the buildup of dirt, grime and other contaminants.

3.11(b)(2) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

In the building housing large breed dogs, two enclosures, affecting four dogs, had the plastic frames around the access doors chewed and damaged by the dogs. This damage allows dirt and grime to penetrate the surface of the plastic and the frames can no longer be properly cleaned and sanitized. All chewed and damaged plastic door
