2.40(b)(2) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Two adult dogs were found with untreated dental disease. Little Cort, an approximately 6-year-old female Dachshund (m/c # 900217000257313) had excessive tartar build up on her canines, front teeth, and molars. On her right side her upper canine and upper front teeth were approximately three quarters covered in a hard dark thick brown material. The gumline on the upper canine was severely recessed with a thick grey creamy discharge. The bottom back teeth are almost completely covered in a hard dark thick brown material. The gumline slightly recessed with a thick grey creamy discharge. The gums adjacent to the affected teeth are red and swollen. On the left side the upper canine is about three quarters covered in a thick, dark brown material with the gum line being slightly recessed. The bottom back tooth is almost completely covered in a hard dark thick brown material.

Nellie, an approximately one-and-a-half-year-old female Pomeranian (m/c # 900215009873353) had excessive tartar build up on her molars and marginal buildup on her upper canines and front teeth. On her right side, her upper canine and front teeth had a moderate buildup of light brown material extending about halfway down the teeth. The back molar was encrusted in a thick tan brown like material. On her left side both canines had a moderate buildup of light brown material covering about half the teeth. Both upper and lower back teeth were heavily encrusted in a thick tan, brown material. Her gums on both sides were severely red and swollen.

Poor dental health can cause pain and discomfort to the animal and can lead to further health issues. These dogs must be evaluated by a licensed veterinarian for an accurate diagnosis and to develop an effective treatment plan. Each dealer must follow an appropriate program of veterinary care for dogs that includes preventive care and treatment to ensure healthy teeth for all dogs.

This inspection and exit interview were conducted with the licensee.
