SOCIETY

Type: ROUTINE INSPECTION

Date: 01-AUG-2023

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The chacoan peccary was limping on the left rear intermittently during inspection. Initially the limp was pronounced, but then it was difficult to appreciate when the animal slowed down. The facility had not identified the limp or communicated it to the attending veterinarian at the time of inspection. Facility must observe animals daily to assess their health and well-being and communicate timely and accurate information on problems of animal health, behavior and well being to the attending veterinarian.

Correct by 21 August 23

3.75(c)(1)

Housing facilities, general.

In the baboon enclosure, the slide door had rust on the door. The surfaces of housing facilities must be constructed in a manner and made of materials that allow them to be readily cleaned and sanitized, and rusty surfaces are difficult to clean and sanitize. In the vervet enclosure, the frame of the pass through from indoor to outdoor housing was damaged, creating a jagged edge that might injure the animals. The surfaces of housing facilities that come in contact with nonhuman primates must be free of excessive rust that prevents the required cleaning and sanitization and jagged edges or sharp points that might injure the animals.

Correct by 21 August 2023

3.125(a)

Facilities, general.

In the goat and sheep area, the gate was damaged and the welds had broken, resulting in sharp points. In the wallaby and cavy area, there was a piece of welded wire fence between the shelter and the fence with a series of sharp points. Sharp points have the potential to injure the animals and these areas were no longer in good repair. Indoor and outdoor housing facilities shall be structurally sound and maintained in good repair to protect the animals from injury.
