Repeat

Facilities, general.

On May 22, 2023, a male Nile Lechwe ID#230057 was found with a cranially displaced fractured right horn and blood on the right side of his head. Caretakers reported that the animal got his right horn stuck in the indoor enclosure fencing in the last stall of the new barn. The fractured segment of the horn was surgically removed, and the wounded area treated the following day. The keeper door that has metal fencing on it appears not to have been altered and the other nearby stalls containing like species do not have areas of this kind of exposed fencing.

The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals. The fencing should be removed from the keeper door or covered with a solid catch-free surface and/or otherwise altered to eliminate the risk of further entrapment.

This inspection and exit interview were conducted with facility representatives.
