Type: ROUTINE INSPECTION
Date: 09-SEP-2014

3.6(a)(2)(12)

PRIMARY ENCLOSURES.

The outside wire runs of the Stacker building that are coated with a material (plastic/fiberglass/rubber, etc.) have numerous missing pieces of the material, leaving bare wire that is not adequate flooring for dogs to walk on. Metal strands of wire used for flooring must be greater than 1/8 of an inch in diameter (9 gauge) or coated. These missing pieces of coating leave the wire flooring less than 9 gauge. This flooring must be repaired or replaced. This will help ensure that the dogs in this building are on flooring that will allow them to move around comfortable and be injury free. Correct by 10-09-2014.

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The shelters in the outdoor housing kennels need to be sanitized. The shelters have grease, grim, and dirt on the sides, inside and out. These shelters need to be sanitized least once every 2 weeks and more often if needed to help prevent an accumulation and help keep disease hazards from dogs. The owner stated it had been a couple of months since the shelters were sanitized. The owner needs to spot clean shelters daily and sanitize these shelters. This will help dogs to be in a healthy environment. The owner must sanitize these shelters. Correct by 09-16-2014

This inspection and exit briefing were conducted with the owner.
