FACILITIES, GENERAL.

*** The guinea pigs are housed in multiple enclosures that are stacked on top of each other. The one multi level wire mesh enclosure on the ground is not level and stable and when the guinea pigs in the top enclosure move around, both enclosures shake back and forth. This needs to be addressed so the set up is structurally sound for the safety of the animals.

Correct by: Aug 7, 2015

An exit briefing was conducted with a facility representative at the time of the inspection.
