Davis Farmland

Type: ROUTINE INSPECTION
Date: 26-JUL-2024

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

At the time of inspection, several expired bottles of medication were observed commingled with other medications routinely used in regulated animals. Expired medications observed included a parasiticide that expired in May 2023 and a bottle of antibiotic medication that expired in December 2023.

Expired medications may not be safe or effective and are not an appropriate method for the treatment or prevention of animal health issues. The facility must ensure that methods of treatment, including the medications maintained for use in animals, are appropriate.

To be corrected by ensuring that all medications maintained for use in regulated animals are appropriate methods for the treatment, control, or prevention of disease. Correct by September 1st, 2024.

2.40(b)(3) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An adult male rabbit was observed to be quiet and not moving around his enclosure at the time of inspection. When stimulated, the animal was reluctant to rouse and appeared lethargic. There was patchy hair loss around the base of both ears, and across the sides and tops of the shoulders, and patches of skin on both ears appear thickened and scaly. On discussion with animal care staff, hair loss and a skin issue was identified approximately two weeks ago and the animal was treated for ear mites. On discussion with the Attending Veterinarian, he was not notified of this ongoing health problem or consulted to direct care.

In order to ensure that animals are provided with adequate veterinary care, problems of animal health, behavior, and well-being must be conveyed accurately and in a timely manner to the attending veterinarian. Correct by July 27th, 2024.

3.56(a)(1) Direct

Sanitation.

A rabbit enclosure housing one rabbit was heavily soiled at the time of inspection. The absorbent pad used for bedding material is brown and wet with an accumulation of waste and soiled hay on top. The rabbit must use this area of the

Inspection Report

enclosure to access food and water receptacles. Primary enclosures housing rabbits must be cleaned frequently enough to prevent the accumulation of excreta and other debris.

To be corrected by ensuring rabbit enclosures are cleaned with sufficient frequency to prevent the accumulation of excreta and other debris. Correct by July 27th, 2024.

3.154

Environment enhancement to promote psychological well-being.

At the time of inspection, there is no written plan for environmental enhancement to promote the psychological well-being of birds. Facilities must develop, document, and follow a species-appropriate plan for environmental enhancement, which must be approved by the attending veterinarian.

To be corrected by November 1st, 2024.

This inspection and exit interview were conducted with facility representatives.
