THE SHOWCASE OF CITRUS

Type: ROUTINE INSPECTION

Date: 25-JUL-2024

### 2.40(b)(3) Direct

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There is a quail at the facility that is in need of veterinary care. The quail has a mass of red-pink fleshy material in the place of its left eye and the left eye itself is not visible at all inside the socket. There is copious dark red-brown fluid surrounding the left eye socket. The top of the quail's head is missing feathers and the skin appears scaly. The right eye is partially open and it is surrounded by red-brown fluid and scabbing. The facility staff did not identify this animal's condition during daily observations that morning.

Failure to observe medical problems and/or communicate those problems to a veterinarian can result in prolonged medical conditions and ongoing pain. A facility representative must observe all animals daily and then ensure a mechanism of direct and frequent communication with a veterinarian so that timely and accurate information on problems of health, behavior, and well-being are conveyed.

To be corrected by July 26, 2024.

### 2.131(d)(2) Repeat

#### Handling of animals.

When the inspector arrived at the facility, there was no attendant present at the feeding station. The inspector waited for over five minutes at the station before an attendant arrived. This left two enclosures that allow for public contact without any readily identifiable attendant present. During this time, the inspector witnessed members of the public feeding and petting animals in both enclosures, including a capybara and various farm animals.

Without an attendant present to monitor interactions, both animals and members of the public are at greater risk of injury. The facility must have a responsible, knowledgeable, and readily identifiable employee or attendant present at all times during periods of public contact.

This inspection and exit interview were conducted with a facility representative.
