Type: ROUTINE INSPECTION
Date: 04-NOV-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

This was a focused inspection on the (direct) veterinary care non-compliance reported on the October 28, 2013, inspection.

* "Madison" a black and white female Shih Tzu ID: (# 455B4C5D57) with mats around both eyes mats were removed.

* "Mandy", ID: (# 093093000), a female King Charles Cavalier had not been treated by a veterinarian and was donated on 28-October-2014.

The following two dogs did not received veterinary care for the C.O.B. on Monday the 3-November-2014. These dogs are still in need of veterinary care.

* "Wheaton Terrier" (# 442E5C4763) has an accumulation of off-white/brown/grey material completely coating and obscuring the "cheek teeth" and molars. This material is also present in various amounts on all the other teeth in the mouth. Gums are deep red, swollen, and extremely receded to expose obscured tooth roots. There is a creamy white discharge along the gum line. Dental issues can cause damage to the gum tissue and tooth/mouth structures, be painful, and impact the ability of the dog to eat normally.

* "Luther", a male Wheaton Terrier (#48345B3821) has an excessively matted hair coat. The dense hair matting did not allow for matt separation to allow for skin visualization. Excessively twisted, densely matted hair covered and dangled off most of his body. This condition could promote and foster skin infections because of the trapped debris/moisture and the lack of air circulation. The licensee must remove the matted hair from this dog. A program of coat maintenance must be established and maintained to ensure that excessive hair matting does not occur.

"Luther" also has an accumulation of green/brown material completely coating and obscuring the _cheek teeth" and molars. This material is also present in various amounts on all the other teeth in the mouth. Gums are red, swollen, and receded to expose obscured tooth roots. Dental issues can cause damage to the gum tissue and tooth/ mouth structures, be painful, and impact the ability of the dog to eat normally.
