Type: ROUTINE INSPECTION
Date: 22-OCT-2015

3.53(a)(1)

PRIMARY ENCLOSURES.

The enclosure housing three rabbits is in need of repair. Two sides of the enclosure consist of a thin chicken wire type material attached to a wooden frame. In places the wire has come loose from the frame leading to some sharp protruding points and large open loose areas. A child was noted putting his hand/arm inside the enclosure through an area of loose wire along the frame of one of the doors of the enclosure. Loose wire areas and wire points can lead to injury, escape of the rabbits or entry of predators. The rabbit enclosure shall be structurally sound and maintained in good repair to protect the rabbits from injury, contain them and keep predators out. Correct by 10/23/15.

3.130

WATERING.

The water receptacles for the sheep and calves need cleaning. The water in both receptacles has hay and debris suspended in it with discoloration to the water. The bottom of the sheep water receptacle is green with algae growth. Water receptacles need to be cleaned to help keep the water supply potable for the animals. The water receptacles shall be kept clean and sanitary.
Correct by 10/23/15.

Exit conducted with owner.
