Certificate: **85-C-0001**
Site: 001

ALBUQUERQUE BIOLOGICAL PARK

Type: ROUTINE INSPECTION
Date: 18-FEB-2015

3.75(a)

HOUSING FACILITIES, GENERAL.

On January 6, 2015, an adult male siamang named "Brian" loosened and/or removed several hog rings which secured the divider mesh in his outdoor exhibit from the frame. Brian was then able to push underneath the divider mesh and attack the two adult male black lemurs (named "Buddy" and "Junior") in the adjacent outdoor exhibit area. Both lemurs received significant trauma and were transported to the veterinary hospital for examination and surgery. One male lemur named "Buddy" survived the siamang attack after surgery (amputation of half of his tail) and treatment for multiple bite wound lacerations. The male lemur named "Junior" also had surgery and treatment for his wounds, but died on January 10, 2015 due to complications from his injuries. "Buddy" has been moved to another enclosure and it was stated that he will not be placed in the exhibit adjacent to the siamang exhibit.

The spacing (at approximately 12-15 inch intervals) and type of attachment device (hog rings) used to secure the divider mesh to the frame in the outdoor exhibit area between these two different species of primates appears to have been a factor this incident. The male siamang was able to loosen and/or remove several hog rings and push underneath the divider mesh in order to attack the two lemurs in the adjacent exhibit. All enclosures housing non-human primates must be designed and constructed so that they are structurally sound for the species housed inside them, contain the animals securely, and restrict other animals from entering. This is a Critical Noncompliance Item (NCI).

Inspection and exit briefing were conducted with facility personnel.
