NORMAN BURKHOLDER

Type: ROUTINE INSPECTION

Date: 07-DEC-2021

3.31(a)(1)

Sanitation.

The primary enclosures have accumulations of wet and soiled bedding underneath the layer of fresh hay. Licensee is currently cleaning enclosures once every two weeks. The cleaning process (method and frequency) utilized is not effective in removing accumulations of wet and soiled bedding. Ineffective cleaning and decreases in the cleaning frequency can expose the guinea pigs to disease and health risks. Correct by ensuring that primary enclosures are cleaned often enough to prevent accumulations of wet and soiled bedding. Correct by December 9, 2021.

This inspection and exit interview were conducted with the licensee.
