Hutchinson, KS 67504

Customer ID: **4093**
Certificate: **48-C-0025**
Site: 001
City of Hutchinson

Type: ROUTINE INSPECTION
Date: 05-JUL-2016

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

There are spots of rust along the perimeter seam of the metal water tank that is in the dog's outdoor portion. This tank is used for a swimming pool for this dog. Rusted surfaces cannot be readily cleaned and sanitized. All surfaces in contact with dogs need to be free of excessive rust that prevents the required cleaning and sanitization. Correct by 11 July 2016.

3.129(b)

FEEDING.

There was residue of wet hay in the bottom of the food receptacle for the pronghorn. Some of the wet hay had a white appearance to it. Contaminated food can transmit disease and may cause the animal to not eat. All food must be protected from contamination and food receptacles must be kept clean and sanitary and measures must be in place to prevent molding, contamination and deterioration of the food. This food receptacle was removed at the time of this inspection.

3.131(d)

SANITATION.

One pot-bellied pig was observed to have a number of flies on the margins of her ears. The ear margins are thickened. This pig is under the care of the attending veterinarian for an ongoing skin problem which could explain the thickened skin, however, the flies are still attracted to this area and are excessive in numbers. The pig shakes her ears repeatedly to try to remove the flies. The bison herd was observed to have excessive numbers of flies on and around their legs. They were observed stomping and swinging their heads in an effort to remove the flies. Flies can transmit disease and can be irritating to the animals. The licensee must establish and maintain an effective method of pest control. Correct by 7 July 2016.

This routine inspection and exit interview were conducted with a facility representative, Dr. Margret Shaver, VMO and Kendall Lundy, ACI.
