Site: 001

WILDERNESS TRAILS ANIMAL
PARK INC

Type: ROUTINE INSPECTION

Date: 05-JUN-2025

3.153(a)(1)(ii) Critical

Primary enclosures.

In an approximately 3-week period, 3 birds housed in the Amazon Encounter Exhibit were found dead in the fish tank water feature that is part of the exhibit. Disposition records show that a lovebird was found deceased on 3/30/2025, a black cap fruit dove was found deceased on 3/19/2025, and another love bird was found deceased on 4/3/2025. A facility representative reported that all three of these birds were found dead in the fish tank water feature that was part of the bird's primary enclosure in the Amazon Encounter Exhibit. The facility representative indicated that these deaths were discussed with the Attending Veterinarian, but no necropsies were conducted. The facility representatives also acknowledged that the birds appeared to have entered the fish tank water feature, were unable to escape, and drowned. The facility representative further acknowledged that changes to the fish tank water feature were necessary to prevent future bird deaths and that the facility is planning modifications. Primary enclosures that are not designed and maintained to protect birds from injury can lead to unnecessary pain, suffering, or death for the birds in the enclosure.

Primary enclosures must be constructed and maintained so that they protect the birds from injury.

To be corrected from this day (6/9/2025) forward.

This inspection and exit interview were conducted with facility representatives.
