BECKY & LEONARD GOODMAN

Type: FOCUSED INSPECTION

Date: 08-DEC-2025

2.40(b)(2) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Two twelve-week-old, male, dachshund puppies named "Boomer" and "Sooner" were observed to appear lethargic and weak. Numerous areas of blood and bloody diarrhea were observed on the floor of the enclosure. Examination of the two puppies by the inspector revealed pale mucous membranes and severe dehydration. The licensee stated she had not noticed the condition of the puppies and the attending veterinarian had not been contacted. The licensee was instructed to immediately take the puppies to the veterinarian.

The licensee shall establish and maintain programs of adequate veterinary care and use appropriate methods to prevent, control, diagnose, and treat diseases.

3.10(a) **Direct** **Repeat**

Watering

In the indoor portion of the kennel, 14 out of 19 water bowls (affecting 22 adults and 5 puppies) were contaminated with roaches. These bowls were the only source of water available to the dogs. Water filled with dead/dying roaches cannot be considered safe to drink and is a source of contamination to the dogs. All dogs must have potable water continuously available unless restricted by the attending veterinarian. The licensee must ensure that clean potable water is available to the dogs at all times.

This inspection and exit interview were conducted with the licensee.
