Customer ID: **43084**

Certificate: **92-C-0144**

Site: 001

CJ's Great Cats World Park Inc

Type: ROUTINE INSPECTION

Date: 22-AUG-2025

---

### 2.75(b)(1)

#### Records: Dealers and exhibitors.

Records for animals on hand and acquisition/disposition of animals were incomplete. The licensee did not have an acquisition record for or include in the Record of Animals on Hand two servals that were being exhibited and a litter of four servals that were born at the facility. The licensee did not make or keep a disposition record for a serval. Appropriate documentation on Acquisition and Disposition of regulated animals, as well as a Record of Animals on Hand, is essential for proper identification and to ensure the humane treatment of animals.

The licensee must make, keep, and maintain records or forms which fully and correctly disclose the following information concerning animals other than dogs and cats, purchased or otherwise acquired, owned, held, leased, or otherwise in possession and control of or which is transported, sold, euthanized, or otherwise disposed of by the exhibitor. These records need to include the offspring born of any animal on the property.

Correct by 12 September 2025.

### 3.127(d)

#### Facilities, outdoor.

There is about a 20- to 30-foot-wide open gap without any perimeter fence on the northwest section of the facility. This gap is at the southwest corner of the hay storage barn to the end of the fence dividing the parking lot from the zoo grounds. The perimeter fence must be maintained so that it functions as a secondary containment system for the animals in the facility. Correct by ensuring the fence meets the requirement of being 8 feet high in all areas and serves as secondary containment.

Correct by September 30, 2025.

### 3.129(a)

#### Feeding.

The horse meat in the food prep room was covered with multiple round cottony formations consistent with mold growth. Moldy meat is contaminated and not safe to feed the animals. Correct by ensuring food fed to the animals is wholesome, palatable, and free from contamination and of sufficient quantity and nutritive value to maintain all animals in good health. Corrected at the time of inspection.

### 3.131(c)

## Inspection Report

---

### Sanitation.

A significant accumulation of debris, unused fencing, corrugated sheathing, and unused crates are amassed in close proximity to the food preparation area and up against the perimeter fence. Lack of housekeeping and sanitation attracts pests into the facility, resulting in unpleasant odors, and may contribute to the spread of disease. Accumulations of debris can also provide areas which can harbor disease-transmitting pests and could increase health risks to the animals. Correct by ensuring that premises (buildings and grounds) are kept clean, in good repair and accumulations of trash are placed in designated areas and cleared as necessary in order to protect the animals from injury, protect their health, and to facilitate prescribed husbandry practices.

Correct by 22 September 2025

### 3.131(d)

### Sanitation.

Rodent feces was observed on top of the water heater and on the floor behind the water heater in the food prep room. Lack of an adequate pest control program can negatively impact the health and well-being of the animals as it can foster the contamination of feed and transmission of diseases. The facility must ensure that a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests is established and maintained.

Corrected at the time of inspection 27 August 2025.

This inspection and exit interview were conducted with the facility representative.
