Certificate: **86-C-0100**

Site: 001

BEARIZONA WILDLIFE PARK, L L
C

Type: ROUTINE INSPECTION

Date: 18-DEC-2025

3.127(d)

Facilities, outdoor.

There are areas of the perimeter fence where the effective height of eight feet has been reduced due to piling of logs or storage of miscellaneous materials adjacent to and/or touching the fence. An insufficient perimeter fence cannot effectively act as secondary containment for the animals inside and can allow unwanted animals or people to enter the facility and potentially harm the animals within. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient height (at least eight feet high) to keep animals and unauthorized persons out. It must be of sufficient distance (at least three feet) from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence.

Correct by 16 February 2026.

This inspection and exit interview were conducted with the facility representatives.
