Type: ROUTINE INSPECTION
Date: 09-SEP-2025

3.150(e)

Facilities, general.

There was a large amount of frost noted in two chest freezers (along the top edge of the walls next to the door) and in one upright freezer (along the front edge of the freezer shelves next to the door). The 3 freezers are used to store frozen food supplies for the raptors.

Per this Section, supplies of food must be stored in a manner that prevents deterioration of its nutritive value. The presence of a large amount of frost in freezers results from warm air entering the freezer, such as from not shutting the door tightly or from an incomplete seal of the door with the door gasket, and can affect the quality of the food stored within. The facility needs to address the large amount of frost present in the food storage freezers to prevent any deterioration of the food supplies. Correct by 10/20/25.

This inspection and exit interview were conducted with facility representatives.
