Type: ROUTINE INSPECTION  
Date: 26-AUG-2025

---

### 3.153(a)(1)(iii) Critical

#### Primary enclosures.

Representatives reported that on or around July 7th, 2025, strong gusts of wind during a severe storm blew a wooden door that normally opens outward, into an enclosure causing damage to the door frame and leaving a small gap. The gap in the door allowed 3 northern bobwhite quail to get out of their outdoor primary enclosure. The facility representatives stated that they heard the birds calling nearby for multiple days after they got out but haven't seen or heard them since. Primary enclosures must be structurally sound and maintained in good repair to securely contain the animals. Lack of secure containment can increase stress, discomfort, cause health issues and doesn't ensure their well-being. Correct by ensuring that all housing facilities are structurally sound and maintained in good repair to contain the animals securely.

\*\*\*Correct from August 27, 2025 going forward.

### 3.153(a)(2)

#### Primary enclosures.

A wooden shelter box in the cockatoo enclosure has not been maintained free from sharp points or edges. It has been worn/chewed on top and metal nail-heads are sticking out. Metal nailheads could cause injury. Ensure that furniture-type objects provided are maintained to prevent harm to the birds housed.

\*\*\*Correct by August 29, 2025.

This inspection and exit interview were conducted with the facility representatives.

Additional Inspectors:

SCOTT WELCH, VETERINARY MEDICAL OFFICER
