Type: ROUTINE INSPECTION  
Date: 10-SEP-2025

---

### 2.40(b)(3) Direct

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An adult white male chinchilla was identified as requiring veterinary care this animals condition was not identified by the facility prior to inspection. The left eyelid is red and inflamed with crusted yellow matting. The animal did not open the left eye while being handled to more closely inspect the condition. The rear of the chinchilla is matted with yellow staining in the fur and thinning of the hair on the inside of the back legs. Additionally, there is an approximately quarter size soft mass with some hair loss and reddening of the skin under the left jaw. Failure to adequately observe animals daily to identify veterinary care conditions can lead to worsening of the condition for individuals and/or failure to prevent disease in other animals. Correct by ensuring that the animals and conditions listed above are reported to the attending veterinarian so that the animal can be properly examined, diagnosed, and treated. Additionally, ensure that daily observation of animals is adequate to identify those signs of abnormal health and behavior and that there is direct and frequent communication of those observations to the attending veterinarian. Correct by 5:00 PM on 11-September-2025.

A complete routine inspection was conducted on 10-September-2025. This inspection report is limited to the Direct non-compliances identified during that inspection. An additional inspection report will be delivered with the other issues identified during this inspection.

This inspection was conducted with the Licensee. The exit briefing for the Direct non-compliance was conducted on 10-September-2025 with the Licensee
