Type: ROUTINE INSPECTION

Date: 17-SEP-2025

2.33(b)(2)

Attending veterinarian and adequate veterinary care.

On January 21, 2025, The Institutional Animal Care and Use Committee (IACUC) was informed that expired Ketamine (expired April 2024) had been administered to 12 rabbits under an approved protocol between May 2024 and January 2025 for survival surgeries, imaging, and blood collection procedures. The 12 rabbits were monitored by the facility lab during the procedures and post-operatively with no reported adverse effects. A clinical veterinarian of the facility stated once the Principal Investigator (PI) of the lab was contacted, corrective action was immediately implemented to ensure proper handling of the expired drug. The potency and efficacy of medications may be affected once they expire, which may be harmful to the animals.

Each research facility shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

To be corrected from this day forward, September 22, 2025

This inspection and exit interview were conducted with the facility representatives.
