KOWIACHOBEE ANIMAL
PRESERVE INC

Type: FOCUSED INSPECTION

Date: 08-SEP-2025

2.40(a)(1)

Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

During an August 21, 2025, inspection, it was noted that the facility did not have formal arrangements with an attending veterinarian and there were animals in need of veterinary care. The facility was given until August 25, 2025, to come back into compliance by employing an attending veterinarian under formal arrangements. The attending veterinarian with an approved program of veterinary care was not obtained until September 2, 2025.

An Attending Veterinarian and a written program of veterinary care is needed to establish an adequate standard of veterinary care for the animals on hand.

Each exhibitor shall employ an attending veterinarian under formal arrangements.

3.84(a)

Repeat

Cleaning, sanitization, housekeeping, and pest control.

The enclosure housing 2 ring-tailed lemurs has a tall metal ladder toward the rear of the enclosure. The animals use this ladder to climb and perch within their enclosure. Three rungs of this ladder have piles of feces on them. The fecal material is dark, dry, and hard. There was no record of when this enclosure was last cleaned.

Failure to clean accumulations of waste materials can increase disease hazards, attract insects, pests, and be a source of odors.

Perches, bars, and shelves must be kept clean and replaced when worn. If the species of the nonhuman primates housed in the primary enclosure engages in scent marking, hard surfaces in the primary enclosure must be spot cleaned daily.

3.130

Direct

Repeat

Watering.

The facility failed to offer potable water as often as necessary for the health and well-being of the animals.

Inspection Report

- The enclosure housing 1 pig and 1 goat had no water. The enclosure had no water receptacle and there was no automatic waterer as seen in the other enclosures. The facility representative was asked to provide water to the animals. A round black rubber tub was filled with water. Both animals approached the receptacle immediately and the pig was observed drinking continuously for approximately 1 minute and 40 seconds.

Failure to offer potable water as often as necessary can lead to dehydration which may have an adverse effect on the health and well-being of the animals.

All water receptacles shall be kept clean and sanitary and potable water must be provided as often as necessary for the health and comfort of the animals.

3.158(a)(1)

Repeat

Cleaning, sanitization, housekeeping, and pest control.

The facility failed to prevent the accumulation excreta and food waste from the primary enclosures housing birds.

- The enclosure housing a scarlet macaw had a metal horizontal support bar that was covered with a layer of caked-on excreta and food waste. A hairy white mold-like substance was seen growing from areas of the caked-on waste. The same accumulation of waste was seen on a 12-inch pink perch that was attached near this metal support bar.
- Inside the enclosure housing a yellow naped parrot, there are two metal cages. The bird was observed sitting on the dark gray cage to the left. On the floor of the dark gray cage is an unattached rope perch and wooden frame that has been chewed. Fragments of the wooden frame are scattered across the floor of the cage with accumulations of excreta covering the rope, wood and floor of the cage.

Failure to clean accumulations of waste materials can increase disease hazards, attract insects, pests, and be a source of odors.

Excreta and food waste must be removed from the primary enclosures and from under and from around primary enclosures as often as necessary to prevent excessive accumulation of feces and food waste, to reduce disease hazards, insects, pests, and odors.

This inspection and exit interview were conducted with facility representatives.
