Type: ROUTINE INSPECTION  
Date: 11-SEP-2025

---

### 2.40(b)(3)

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The buffalo bull on the safari is missing large spots of fur on this back end. He is missing hair completely on his rump around the base of his tail and the skin looks crusty. On his back and sides, the fur is missing in multiple circular patches. The licensee had noticed the hairloss but had not contacted his vet to see if treatment was needed. Animals can lose hair due to a variety of conditions that can be itchy, painful, or uncomfortable. If the hairloss continues, the animal may not be able to acclimate to seasonal changes. Animals must be observed daily and any abnormal conditions communicated to the attending veterinarian in a timely manner. Correct by contacting the vet and following their recommendations by 9/18/25.

### 3.27(b)

#### Facilities, outdoor.

The guinea pigs are being housed in an outdoor corral. The temperature during the inspection was 82-90 degrees. Guinea pigs are very sensitive to temperature and humidity and can quickly become ill when exposed to extremes. Guinea pigs cannot be housed outside unless the facility is located in an appropriate climate and has prior approval from the Deputy Administrator. Correct by 9/21/25 by housing the guinea pigs indoors or obtaining approval.

### 3.129(a)

#### Feeding.

The facility is thawing a large box of frozen chicken breasts uncovered, outside on the deck. The temperatures during the inspection ranged from 82-90 degrees. This chicken was intended for feeding to servals, caracals, lynx, and other carnivores that evening. The edges of the box had already thawed but the middle was still frozen solid. The licensee states this is usually how they thaw the chicken until they can break it apart and then smaller portions are placed in the mini fridge until they are fed out. Thawing meat this way causes uneven thawing, allowing the outside portion that thawed first to grow harmful bacteria, start to deteriorate, and attract pests such as flies. Additionally, thawing outside on an uncovered deck can lead to contamination by dirt and debris and attract unwanted animals. Food must be wholesome, palatable, and free from contamination. Correct by 9/16/25 by ensuring meat stays frozen or refrigerated until it is being prepped and fed out.
