Date: 13-JAN-2026

3.75(e)

Housing facilities, general.

Feed and bedding intended for use for four black titi monkeys, two Venezuelan red howler monkeys, four bearded saki and two red ruffed lemurs is stored improperly. At this facility, nonhuman primate bedding is stored together with feed and bedding for other animals inside a storage outbuilding; some of the wooden shaving bedding is stored outside the storage building, directly on the ground, and one of the bags is torn open to expose the shavings inside. Additionally, bags of primate diet are stored directly up against the wall inside the storage building, and there are boxes of rodenticide stored on the floor of the storage building, not far from the feed and bedding.

Food that is not properly stored is subject to deterioration and contamination due to chemical toxins, microbial growth or pests and vermin, which can lead to animal illness. The licensee must ensure that all food and bedding is stored in a manner that protects the supplies from spoilage, deterioration of nutrients, contamination and vermin infestation. These supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. Only the food and bedding currently being used may be kept in animal areas and when not in actual use, open food and bedding supplies must be kept in leakproof containers with tightly fitting lids to prevent spoilage and contamination. Substances that are toxic to nonhuman primates but that are required for normal husbandry practices must not be stored in food storage or preparation areas, but may be stored in cabinets in animal areas.

TO BE CORRECTED BY 01/23/2026

This inspection and exit interview were conducted with the licensee and attending veterinarian.
