Customer ID: 502428

Certificate: 67-C-0015

Site: 001

Allstar Farms LLC

Type: ROUTINE INSPECTION

Date: 19-NOV-2025

---

### 2.40(a)(2)

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The attending veterinarian was not made aware of the sudden death of 2 llamas and a pig nor was he notified of 2 llamas with neurological problems. The facility did consult with another veterinarian however, per a facility representative, the animals died before care could be provided. Furthermore, the attending veterinarian did not know that the facility currently feeds mainly corn to the pigs and stated that this did not constitute an appropriately complete/balanced diet for them. When the veterinarian is not given the appropriate authority, the provision of veterinary care may be inadequate or inappropriate. The licensee must assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use. To be corrected by December 05, 2025.

### 2.134(b)

#### Contingency planning.

The contingency plan available for review at the time of inspection was dated in April 2023, more than 2 years ago. The plan must be reviewed at least annually to ensure that it continues to adequately address the regulatory requirements and the facility must maintain documentation of those annual reviews. Correct by ensuring the facility's contingency plan is reviewed annually and maintaining documentation of the annual reviews. Correct by January 22, 2026.

### 3.125(a)

#### Facilities, general.

Two areas were identified in need of repair:

o A missing wooden board at the bottom of the fence between the two pig enclosures created a significant gap spanning an approximately 5 foot area (between two posts) with exposed sharp metal points throughout. The metal wire at the bottom of the fence in the area preceding the gap curled up creating sharp points protruding into the enclosure spanning an approximately 4 foot area.

o The back corner fence of the enclosure containing a zebu and a sheep was leaning significantly. Per a facility representative, the camel on the other side of the fence, has been leaning on and damaging the fence.

Damaged areas such as these could result in animal injury. The animal housing facilities must be maintained in good repair to protect the animals from injury and to safely contain the animals. Correct by December 12, 2025.
