

## Inspection Report

James Oleson  
4355 Spring Lake Hwy  
Brooksville, FL 34601

Customer ID: 3214  
Certificate: 58-C-1114  
Site: 001  
James Oleson

Type: ROUTINE INSPECTION  
Date: 19-NOV-2025

### 3.77(f)

#### **Sheltered housing facilities.**

There are multiple sections of the perimeter fence that are non-compliant, leaving the black spider monkey, the patas monkeys, the ring-tailed lemurs, the vervets, the snow macaques, and the crab-eating macaque without an adequate perimeter fence.

-There are approximately 8 panels of perimeter fence along the south side of the facility that are less than 6 feet in height.  
-A section of the south perimeter fence is not flush with the ground and leaves a gap between the bottom of the fence and the ground.

-There is a large gap beneath the gate beside the vervet enclosure.

An insufficient or incomplete perimeter fence can allow unwanted animals or people to enter the facility and potentially harm the animals within. The perimeter fence must be constructed so that it protects nonhuman primates by restricting unauthorized humans, and animals the size of dogs, skunks, and raccoons from going through it or under it and having contact with the nonhuman primates. It must be of sufficient height (at least six feet high) to keep unwanted species out. It must be of sufficient distance (at least three feet) from the outside wall or fence of the primary enclosure to prevent physical contact between animals inside the enclosure and outside the perimeter fence.

To be corrected by December 19, 2025.

### 3.127(d)

#### **Facilities, outdoor.**

There are multiple sections of the perimeter fence that are non-compliant, leaving the Patagonian cavies without an adequate perimeter fence.

-There are approximately 8 panels of perimeter fence along the south side of the facility that are less than 6 feet in height.  
-A section of the south perimeter fence is not flush with the ground and leaves a gap between the bottom of the fence and the ground.

-There is a large gap beneath the gate beside the vervet enclosure.

An insufficient or incomplete perimeter fence can allow unwanted animals or people to enter the facility and potentially harm the animals within. An incomplete perimeter fence is also not able to act as secondary containment for the animals and can lead to escape. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient
