Type: ROUTINE INSPECTION  
Date: 13-JAN-2026

---

**3.125(a)                    Critical**

**Facilities, general.**

An African Crested Porcupine dug under its fencing and in a separate incident a Bennet's Wallaby exited through a damaged part of its fencing resulting in both escaping their respective outdoor enclosures. Neither of the animals have been recovered by the licensee. Escape from enclosures can result in distress, illness, injury, starvation, dehydration or death of the animal. Indoor and outdoor housing facilities shall be constructed appropriately for the animals involved and be maintained in good repair to contain the animals. The facility corrected both enclosures prior to this inspection and currently adequately contain the remaining animals.

Correct from January 13, 2026, forward.

**3.154                    Repeat**

**Environment enhancement to promote psychological well-being.**

An avian environment enhancement plan to promote the overall psychological well-being of the birds is not in place at the facility. Exhibitors must develop, document and follow a species appropriate plan for environmental enhancement to promote the psychological well-being of the birds and it must be approved by the attending veterinarian. Correct by developing the environment enhancement plan as well as having it reviewed and approved by the attending veterinarian. Correct by 30 January 2026.

**3.157(a)(1)**

**Water quality.**

The pool for the demoiselle cranes, ringtail ducks and black swan does not have the water filtration system actively running, the pool is one fourth full of mostly clear water, and, as waterfowl often defecate in their water sources, there is a heavy build-up of dark brown particulate material on the bottom and sides of the pool. The facility states it has not drained and cleaned the pool for some time. The frequency of cleaning and the condition of the water does not suggest adequate water quality and this may create a disease hazard to the birds. Particulate animal and food waste, trash, or debris that enters the pool or other aquatic area must be removed as often as necessary to maintain the required water quality and minimize health hazards to the birds

Correct by 13 February 2026.
