Type: ROUTINE INSPECTION
Date: 22-JAN-2026

3.125(a)

Facilities, general.

At the east side of the camel enclosure, there was an approximately 6 ft. section of loose wire fencing along the bottom with some pointed wire ends. A dividing wire fence panel within the camel's shelter structure has detached from the top portion of its support post resulting in an approximately 5ft.section of loose, unstable and unsupported fencing. Additionally, there were three exposed nails along the bottom of the west side of the camel's shelter structure. Housing facilities in disrepair including those with loose fencing, sharp wires or nails may lead to animal injury. Housing facilities must be structurally sound and must be maintained in good repair to protect the animals from injury and contain the animals.

Correct by 02/06/2026.

3.127(a)

Facilities, outdoor.

The east side enclosure housing two camels did not provide sufficient shade for the number of housed animals. There was a shade structure present in the enclosure; however, at time of inspection, this structure was not large enough to adequately provide enough shade to comfortably protect both animals from direct sunlight. Outdoor enclosures with inadequate shade may cause overheating or discomfort of the animals. Sufficient shade by natural or artificial means must be provided to all animals kept outdoors to protect themselves from the direct sunlight.

Correct by 02/13/2026.

This inspection and exit interview were conducted with the licensee.
