Type: FOCUSED INSPECTION
Date: 16-DEC-2025

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Bryson, a black and brown male Yorkshire terrier with ID tag #80, DOB 07/01/2021, had a moderate accumulation of brown material on the surface of the cheek teeth. The licensee stated his dogs are not on an oral preventative care and that he schedules dental cleanings at the recommendation of his veterinarian. Bryson has not received professional dental cleaning. A dental cleaning was suggested by his veterinarian on November 18, 2024.

It is important to ensure all animals have no signs of dental disease. The abnormal build-up of material on the teeth can cause damage to the gum tissue and tooth structures. This condition could be painful, may decrease the dog's ability to eat normally, and may result in spread of bacteria to other parts of the body such as liver and kidneys which can negatively impact the overall health of the animal.

The licensee must communicate with the attending veterinarian to evaluate the dog and determine an appropriate plan for diagnosis and treatment.

Correct by 01/06/26.

This inspection and exit interview were conducted with the facility representative.
