Type: ROUTINE INSPECTION
Date: 20-NOV-2025

2.40(b)(3) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A female maltese (microchip #900164001625419) had hair loss on the top of its head along with an open wound and dried up blood surrounding the wound. The licensee had observed the hair loss prior to inspection, but had not observed the open wound prior to inspection and was not treating the dog.

A tan female Doodle (microchip #900217000187652) was observed to be limping on its left rear leg. There were no obvious wounds or injuries to the leg during examination. The licensee had not observed this dog to be limping prior to inspection.

Failure to conduct thorough daily observations to identify health problems and communicate them in a timely manner to the attending veterinarian can lead to unnecessary pain and lead to serious health problems due to lack of appropriate treatment. Veterinary care issues must be identified and communicated in a timely manner to the attending veterinarian so they can be adequately treated by or under the guidance of the attending veterinarian. The licensee must observe all dogs on a daily basis. Correct starting on 11/21/25.

This inspection and exit interview were conducted with the licensee.

End of report.
