Type: ROUTINE INSPECTION

Date: 13-JAN-2026

3.1(a)

Housing facilities, general.

Inside the 2nd outdoor chain link enclosure from the west a smaller gauge wire panel was placed over the chain link separating the enclosures at the level of the enclosed Corgi dog. This smaller gauge wire was torn and bent creating multiple sharp points into the enclosure at the bottom part of the panel putting the damaged area at approximately the level of the Corgi's head. Sharp points create a potential hazard for injury.

In the shelter building, the floors of the inside part are made of plastic grating. Two of the enclosures have damaged floors that could result in entrapment or injury. One enclosure containing a single female Corgi has a large hole (approximately 2" x 6") by the dog door. The other floor (enclosing 2 dogs) has several large breaks in the center of the floor supported by a cement block placed under the floor. The licensee must maintain flooring and other surfaces to prevent injury or entrapment of the enclosed dogs.

To be corrected by: 20 January 2026

The damaged wire was repaired at the time of inspection.

3.10(c)

Watering

In an outdoor enclosure with 1 adult Poodle dog, the bottom of a black water receptacle was covered with a layer of green algae-like material. This algae-like material may be harmful to the dog and indicates that the receptacle has not been kept clean and sanitized. The licensee must clean and sanitize and maintain the water receptacles for the health and well being of the dogs.

Corrected during the inspection

3.11(d)

Cleaning, sanitization, housekeeping, and pest control.

Inside the entry where the unopened bags of dog food are stacked, there was a large amount of rodent feces on the floor and pallet around the food. There were 3 plastic carriers stacked next to the dog food which also had rodent feces along the edges and inside the carriers. A "sticky trap" and small bag of rodent bait were on the floor between the wall and pallet

Inspection Report

but the large amount of rodent feces indicate that the current pest control plan is ineffective. Rodents carry diseases that can affect the dogs and contaminate the food. The licensee must establish an effective program for the control of insects, external parasites affecting dogs, and animals that are pests, and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

To be corrected by: 16 January 2026

3.13(b)(2)

Veterinary care for dogs.

The medical records of 2 dogs were incomplete. Information on medication given, dose, route and times given were not provided. This information is required as part of a complete medical record. Licensee must record the date and a description of the problem, examination findings, test results, plan for treatment and care, and treatment procedures performed.

To be corrected by: 14 January 2026

This inspection and exit interview were conducted with a facility representative.
