Type: ROUTINE INSPECTION  
Date: 11-SEP-2025

---

### **3.1(a)**

#### **Housing facilities, general.**

There were five (5) Border Collies in a sheltered facility with shredded insulation above their primary enclosures. The pieces of insulation can fall in the enclosures and potentially be ingested by the dogs. This could injure the animals by making them sick if ingested. The insulation in the facilities must be in good repair to protect the animals from injury.

Correct by 1 November 2025

### **3.75(c)(1)(i)**

#### **Housing facilities, general.**

Noticeable rust was observed along the caging of the dens for two (2) white-throated capuchins. Rusty surfaces cannot be effectively cleaned and sanitized. Any surfaces that come in contact with nonhuman primates must be free of excessive rust that prevents the required cleaning and sanitization, or that affects the structural strength of the surface.

Correct by 1 November 2025

### **3.125(a)**

#### **Facilities, general.**

An enclosure with six (6) Painted Desert sheep had a 3-sided shelter that was knocked down by the animals. The shelter has sheets of metal with sharp edges and broken wood on it that can be injurious to the animals housed in the enclosure. The broken structure needs to be in good repair to protect the animals from injury.

Correct by 1 November 2025.

This inspection and exit interview were conducted with licensee.
