

Inspection Report

State of Minnesota
13000 Zoo Boulevard
Apple Valley, MN 55124

Customer ID: 2793
Certificate: 41-C-0019
Site: 001

Minnesota Zoological Gardens

Type: ROUTINE INSPECTION
Date: 01-DEC-2025

3.127(d)

Facilities, outdoor.

The facility's perimeter fence surrounding the outdoor housing areas is not intact. Seven sections of the perimeter fence have a gap of approximately one foot underneath the fence. In addition, in one section of the perimeter fence the top rail of the chain-link fence is broken off and leaning on the ground. It appears wobbly and the position of the top rail turns the normally straight fence section into a concave section.

A perimeter fence with gaps underneath and a section in disrepair doesn't ensure it will be able to keep wild animals out and it also doesn't ensure it will be able to keep regulated animals within the confines of the perimeter fence should a regulated animal escape from its enclosure.

Correct by January 2, 2026 by fixing the perimeter fence to restrict animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility.

3.158(d)

Cleaning, sanitization, housekeeping, and pest control.

The facility does not have an effective pest program to control mammalian pests. Active mouse activity was observed in the tropical aviary. The inspector observed a mouse in the Bali mynah enclosure running across the bird's food tray.

Pests such as rodents can affect the health and well-being of animals by spreading disease and contaminating food, surfaces, and animal housing areas.

Correct by January 2, 2026 by establishing and maintaining an effective program to control insects, ectoparasites, and avian and mammalian pests to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

This inspection and exit interview were conducted with facility representatives.
