Certificate: **93-C-1183**

Site: 001

Kennedy Meadows Wild Canine
Conservation Inc

Type: RE-LICENSE INSPECTION

Date: 30-SEP-2025

3.125(a)

Facilities, general.

Several outdoor enclosures containing adult wolves had exposed sections of 4inch by 4inch hog wire with sharp points inside the enclosure. The facility had placed sections of hog wire over large holes that had been dug by wolves, which created areas in which the animals could become injured or entrapped. There were also portions of wood fencing, plastic feed and/or water bowls, and plastic enclosures that had been chewed by the animals leaving sharp points. Outdoor housing facilities must be structurally sound and must be maintained in good repair to protect the animals from injury.
Correct by: 2nd relicense inspection

3.127(d)

Facilities, outdoor.

In several areas of the perimeter fence, there were gaps, trees, or objects that render the fence ineffective. An approximately 6 inch gap was noted on both sides of a gate in the perimeter fence that could allow potential ingress of unwanted animals. In two corners of the perimeter fence, the chain link was not firmly attached to the posts allowing the fencing to be pushed outward leaving approximately 18 inches of fencing unattached at the base. There were several sections of fencing the were sagging inward and in need of support posts. There were several trees adjacent to the outside of perimeter fence that were overgrown and/or overhanging, decreasing the effective height. On the inside of the perimeter fence, there were transport crates and other materials piled against the fence. On the outside of the perimeter fence there was a pile of pallets stacked adjacent to the fence as well as a shed approximately 10ft x 10ft that also reduce the effective height of the fence and or provide an access point to go over the fence. In addition, there was an approximately 20 ft long section of perimeter fence that was also being used as containment for an enclosure housing pet animals. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through or under it and having contact with the animals of the facility and so that it can function as a secondary containment system for the animals in the facility.
Correct prior to 2nd relicense inspection

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.
