Type: ROUTINE INSPECTION  
Date: 09-DEC-2025

---

### **3.127(c)**

#### **Facilities, outdoor.**

Approximately 1/3 of the outdoor paddock (measuring about 100 feet by 100 feet) where 16 cattle are housed is covered in standing water and thick mud that is in parts turning green indicating algae growth. The water is due to excessive wet weather in the area over the past few weeks. The animals have dry pathways to access food, water and shelter. Some of the animals are standing in the mud and have wet hooves. The facility has employed some mitigation techniques such as the use of a water pump. Lack of adequate drainage can lead to slip and fall injuries, development of veterinary care issues, spread of disease, odors and attract pests. A suitable method of drainage shall be provided to rapidly eliminate excess water. The method of drainage shall comply with applicable Federal, State, and local laws and regulations relating to pollution control or the protection of the environment.

Correct by 31 December 2025.

This inspection and exit interview were conducted with the IACUC representative.
