Certificate: **43-C-0414**

Site: 001

Promised Land Safari Park

Type: ROUTINE INSPECTION

Date: 15-AUG-2025

2.40(b)(2) Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

At time of inspection a 30 year old male Macaw hybrid, McGee, was observed in the bottom of his enclosure. The bird was not standing, but sitting back on both legs. Some fecal material was noted on the tail feathers of the bird, perhaps due to a preening issue. The bird interacted when spoken to. The licensee advised that he had been pulled from the flock due to being "picked on". The behavior the bird was exhibiting was unusual and uncharacteristic.

Health and well-being of animals is important for animal exhibition. Due to the age, presentation, and potential preening issue , a consultation with a veterinarian is needed.

3.153(c)

Primary enclosures.

At time of inspection three Sebastopol Geese were housed in an enclosure that only provided a small pool with a depth less than one foot. This type of aquatic fowl have behaviors that require immersion and foraging. The pool provided does not meet the appropriate standard to achieve this. To ensure social behaviors for the aquatic birds, an appropriate water feature should be provided or relocate the birds to an area that would provide such.

To be corrected by: 8.22.25

This inspection and exit interview were conducted with facility representative.
