Inspection Report

Miller Park Zoo 1020 S. Morris Avenue Bloomington, IL 61701 Customer ID: 2552

Certificate: 33-C-0006

Site: 001

Miller Park Zoo

Type: ROUTINE INSPECTION

Date: 24-OCT-2024

3.157(a)(2)

Water quality.

The primary enclosure that contains 2-Swan Geese and 2- Bar-headed Geese has a 20ft x 10ft x 12ft deep pond that is completely dark green with algae. The pond containes 28 Coy fish and is only cleaned once per year. Due to the difficulty in cleaning a 12 ft deep pond with the fish, the lack of a proper cleaning schedule to prevent the accumulation of algae growth and fish matter is not being done as often as needed. While the geese located in the enclosure appeared to be healthy, and they clean the filter daily, the pond needs to be maintained for proper water quality more often.

An excessive amount of algae in a pond with fish fecal matter that is not being eliminated or treated often enough through regularly scheduled cleanings' could be a possible source of health issues for the regulated animals that swim/utilize the pond.

Pools or other aquatic areas with drainage systems must provide adequate drainage and must be located so that all of the water contained in such pools or other aquatic areas may be effectively eliminated when necessary for cleaning the pool or other aquatic area or for other purposes. Pools or other aquatic areas without drainage systems must be aerated and have an incoming flow of fresh water or be managed in a manner that maintains appropriate water quality in accordance with current professionally accepted standards appropriate for the species.

To be corrected by: November 15, 2024

This inspection and exit interview were conducted with facility representative.
