BRANDEIS UNIVERSITY

Type: FOCUSED INSPECTION

Date: 24-JUL-2019

## 3.26(a)

#### FACILITIES, INDOOR.

Waltham, MA 02454

On July 19th, 2019, when an issue with the air conditioning system developed that compromised the ability of the vivarium to maintain an appropriate ambient temperature for hamsters, animal facility staff were not made aware of the issue in a timely manner. When the appropriate individuals were notified on July 20th, initial corrective measures were taken. The temperature continued to rise, and recorded temperatures in the hamster facility on July 21st ranged from 88 – 93 degrees. The initial corrective action was insufficient to maintain the appropriate temperature for hamsters, leading to an ambient temperature of >85 degrees for more than 12 hours. Indoor housing for hamsters shall provide for the health and comfort of the animals, and the ambient temperature shall not be allowed to exceed 85 degrees.

To remain corrected after July 24th, 2019.

This inspection and exit interview were conducted with facility representatives.
