Inspection Report

Cock A Doodle Zoo 15801 Pilar Road North Scandia, MN 55073 Customer ID: **27809**

Certificate: 41-B-0238

Site: 001

COCK A DOODLE ZOO

Type: ROUTINE INSPECTION

Date: 24-MAY-2016

2.75(b)(3)

RECORDS: DEALERS AND EXHIBITORS.

The disposition of two ring-tailed lemurs and two hedgehogs by the licensee occurred without the information required under this section accompanying the animals and was not retained by the licensee. The lack of paperwork containing this information does not provide the acquisition information for the recipients and does not allow for tracking of animals by APHIS officials as necessary. Ensure all required information under this section accompanies animals during transport. Correct immediately.

3.80(a)(2)(2)

PRIMARY ENCLOSURES.

Two primary enclosures containing a total of ten lemurs had the following noted during inspection:

- ---One enclosure has two holes, one in the wall and one in the ceiling, large enough for the infant lemur to possibly crawl into or cause injury.
- ---One enclosure has a section of the wire panel that is weakened and now bowing. The holes in the panel are large enough for the lemur's fingers to go through. Electrical wire running just outside of this area of the enclosure is close enough for the lemur's to potentially grab onto.

Holes, weakened enclosure panels and accessible electrical wires are physical hazards that could potentially cause injury or possibly death by electrocution. Eliminate the physical hazards and maintain primary enclosures in a condition to protect the animals from injury. Correct by 5/27/16.

3.125(a) REPEAT

FACILITIES, GENERAL.

Three primary enclosures housing one bobcat, one porcupine and four Patagonian Cavies have one or more gaps/holes running along the underside of the enclosure fence large enough where the animal(s) could potentially escape or cause injury, or could allow access by pests or other animals from the outside of the enclosure. Repair the primary enclosures to eliminate gaps/holes, to contain the animals and to prevent access pests or other

Prepared By:	KEVIN WILKEN, A C I USDA, APHIS, Animal Care	Date: 24-MAY-2016

ш	ш			Ю.

3.129(a)

FEEDING.

A bag of food being fed to the skunks was contaminated with a beetle-type insect. Contaminated food does not ensure the food is wholesome and may cause illness to the animals. Store food in a such a way as to ensure it is wholesome and to prevent it from becoming contaminated. Correct immediately.

Note: The contaminated feed was disposed of at the time of inspection.

3.131(c)

SANITATION.

A garbage can without a tight fitting lid and filled with discarded food was knocked over and laying in an enclosure accessible by approximately 9 goats, 5 sheep, 1 alpaca, and 1 pig. The animals were able to access the garbage and ingest it. Garbage is not wholesome feed for the animals and can cause illness if ingested Place all trash and trash containers in designated areas and dispose of in a timely manner to protect the health of the animals. Correct immediately.

Note: All previous veterinary care issues identified during the last inspection on 3/28/2016 were addressed by the licensee with his Attending Veterinarian.

Inspection and exit briefing conducted with facility representative, VMO Dr. Debra Sime and ACI Kevin Wilken.

End of report.
