Certificate: 93-C-0040

Site: 002

ZOOLOGICAL SOCIETY OF SAN

DIEGO

Type: ROUTINE INSPECTION

Date: 10-APR-2023

3.125(a)

Facilities, general.

In several enclosures, there were potential hazards for the animals contained in the enclosure that could result in injuries. In hill pen 2, where the cape buffalo was housed, there were metal fenceposts and rebar extending 1 foot vertically out of a retaining wall near the entrance to the enclosure, at chest height for the animal. According to the facility, the record rain washed away the dirt and rocks in the retaining wall exposing the pipes. In Addax/Addra there was a pvc irrigation pipe exposed across a ravine, creating a potential entrapment hazard. In the gerenuk enclosure, there was hardware wire with sharp points at face height for the animals. In PB08, on the door of the barbary sheep enclosure, the fence was no longer in good repair and had sharp points.

Facilities must be structurally sound, constructed with material that is an appropriate strength for the animals involved and shall be maintained in good repair to protect the animals from injuries and contain the animals.

Corrected during inspection.

3.127(d) Critical

Facilities, outdoor.

The perimeter fences and additional security methods in place were not sufficient to keep mountain lion from entering the facility and predating on four ungulates. The facility is located within the native habitat range for mountain lions and staff have successfully handled incursions by a different mountain lion through nonlethal mitigation measures that were effective preventing predation in the past. Despite these measures being in place, on February 2, 2023 a mountain lion entered the facility and predated one peninsular pronghorn. Although the facility staff quickly sought to prevent additional losses by implementing additional methods to prevent predation, during the next sixty-six (66) hour period the same mountain lion entered the facility at least three additional times and predated three additional animals (two East African Sitatunga and one Zambezi Lechwe). Following the last predation event, the facility was issued a state permit to allow for the implementation of non-lethal mitigation/deterrence methods. Since this time, the facility has partnered with local experts in wildlife biology and the California Department of Fish and Wildlife to identify and implement these lawfully authorized non-lethal deterrents and has successfully prevented additional predation.

Inspection Report

All licensees who maintain animals in outdoor housing facilities are required to have a perimeter fence that is constructed so that it protects animals in the facility by restricting animals and unauthorized people from having contact with the animals in the facility. Failure to prevent entry of animals such as mountain lions may result in harm to the regulated animals.
