OUT OF AFRICA WILDLIFE

PARK, LLC

Type: ROUTINE INSPECTION

Date: 26-SEP-2023

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A male Scarlet Macaw "Big Bird" had complete feather loss on his upper legs and lateral flanks showing bare patches of skin where the underlying skin appeared normal. The facility representative indicated that the animal's condition was chronic and due to feather picking by himself and sometimes the other macaw present in the enclosure. The facility representative also stated that Big Bird's current condition was the worst it has been, but the facility had previously been in contact with a veterinarian overseeing his care and that he was on a supplement to help with feather loss. No records on Big Bird documented his feather loss condition, exam or consultation with a veterinarian or a treatment plan. In discussion with the attending veterinarian, they determined that current care for Big Bird is insufficient and have scheduled his exam the following week. Failure to use the appropriate methods to control and treat diseases and injuries in birds may result in prolonging of their illness and contribute to their discomfort. Each exhibitor shall establish and maintain programs of adequate veterinary care that include the appropriate methods to prevent, control, diagnose and treat diseases and injuries.

Correct by 13 October 2023.

3.153(a)(1)(i)

Primary enclosures.

Multiple wire sharp points are found in the outdoor community aviary housing 2 Helmeted Guineafowl, 1 Alexandrine Parakeet, 1 Scarlet Macaw, 1 Blue-and-Yellow Macaw, 4 Ringneck Doves, and 1 Red-Crested Turaco. The metal wires of varying gauge are used to secure housing structures or enrichment items and the ends (longest one is approximately 5 inches long) are not tucked and point outward into the enclosure. Primary enclosures housing birds that have sharp points may cause them injury. Primary enclosures must be constructed and maintained so that they have no sharp points or edges that could injure the birds.

Correct by 13 October 2023.

3.154(c)(4)

Environment enhancement to promote psychological well-being.

	MADELINE ANNA VETERINARY MEDICAL OFFICER	Date: 29-SEP-2023	
Received by Title:	Facility Representative		Date: 29-SEP-2023

United States Department of Agriculture Animal and Plant Health Inspection Service

MANNA INS-0000896227

Inspection Report

At time of inspection, there were 3 individually housed birds that cannot see or hear birds of their own or compatible species including a female Scarlet Macaw "Apache", a female Ringneck Dove "Malibu", and a female Peahen "Gladys". There were no provisions in the avian environment enhancement plan for the Ringneck Dove and the Peahen to be provided additional special attention and the provisions listed for the Scarlet Macaw had not been approved by the Attending Veterinarian. Failure to provide additional environment enhancement for birds in special consideration categories listed in the regulations may lead to their poor psychological health and welfare. Certain birds must be provided special attention regarding enhancement of their environment, based on the needs of the individual species and/or individual bird and in accordance with the instructions of the attending veterinarian. Birds requiring special attention include individually housed social species of birds that are unable to see and hear birds of their own or compatible species.
