Hidden Valley Animal Adventure

Type: ROUTINE INSPECTION

Date: 25-NOV-2024

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A zebra was observed repetitively making circular motions with its head and neck, scanning a wall of its winter holding enclosure. Multiple episodes of variable duration, at least one over thirty seconds, were observed during inspection of the holding facility. A facility representative described this behavior as the zebra "trying to get out." While this behavior did not occur last winter, it was first observed when zebras were moved from the park to winter enclosures 2 years ago. The facility shared that it takes a variable amount of time to resolve over the course of the winter and the zebra is otherwise healthy. The Attending Veterinarian shared that they were alerted to the problem when it first arose, at which point no intervention was deemed to be needed, but no updates have been given since. Recurring repetitive behaviors, however, especially in response to environmental changes, may indicate psychological stress and failure to communicate changes or recurrence may limit the veterinarian's ability to provide updated guidance towards control or treatment. The facility must provide for timely and accurate information on animal problems with the attending veterinarian.

Correct by December 5, 2024.

2.134

Contingency planning.

A written plan to provide for the humane care and handling of animals in the event of an emergency or disaster was unavailable for inspection. Inability to produce a written plan to provide guidance for the appropriate care of the animals during reasonably anticipated emergencies may compromise animal welfare in the event of such emergencies. The plan must be available for inspection and shall address the response, personnel responsible for the actions to be taken, chain of command, etc., as required in Section 2.134 of the Animal Welfare Regulations.

Correct by December 16, 2024.

3.125(a)

Facilities, general.

A goat and sheep enclosure at the winter housing barn contains multiple structures in disrepair. The fencing of the outdoor goat yard includes a fence post with broken outer casings and a section of the barn ceiling over animal areas is

Inspection Report

open with broken and fragmented boards. Broken materials and structures may pose an injury risk to animals housed within. The facility must be structurally sound and maintained in good repair to minimize these risks.

Correct by January 6, 2024.

3.154

Environment enhancement to promote psychological well-being.

The facility does not currently have an environmental enhancement plan approved by the attending veterinarian to promote the overall psychological well-being of birds on the premises. Exhibitors must develop, document, and follow a species-appropriate plan for environmental enhancement to promote the psychological well-being of birds that is within industry standards and approved by the attending veterinarian. This plan must be made available for future inspections.

Correct by December 23, 2024.

3.158(c)

Cleaning, sanitization, housekeeping, and pest control.

The enclosure housing waterfowl in the winter holding facility contains an inactive appliance with exposed components, wiring, and spaces that may injure or trap an animal. There is also an accumulation of dusty building materials and miscellaneous objects atop the appliance that may pose a hazard to birds. There is a water trough in front of the appliance that may further encourage animals to approach and potentially engage with the appliance. Primary enclosures must be kept clean and in good repair to protect birds from injury and facilitate appropriate housekeeping.

Correct by December 9, 2024.

This inspection and exit interview were conducted with facility representatives.
