THOMAS & PAMELA SELLNER

Type: ROUTINE INSPECTION

Date: 14-NOV-2016

# 3.75(c)(3) REPEAT

#### HOUSING FACILITIES, GENERAL.

There is a metal ladder for enrichment within the vervet enclosure that is dirty. There is a thick layer of brown to black grime on the top (handles) of the ladder. There is an excessive amount of bird feces on and/or within all of the enclosures within the sheltered portion of the "primate building". The bird feces is mainly located on the enclosure fences of all three enclosures, housing a total of two macaques and four baboons, but there is also an excessive amount of bird feces within the macaque enclosure. The bird feces in the macaque enclosure is covering nearly the entire top of one perch and feces was seen mixed in with some of the bedding. In addition, bird droppings were located on the floor throughout the human walk-ways and on the wall separating the two rooms of baboons. Failure to clean housing facilities and enrichment items within primary enclosures can lead to disease hazards, pests and odors. The licensee must ensure that hard surfaces with which the nonhuman primates come in contact are spot cleaned daily and sanitized at least every two weeks. Furthermore, the licensee must ensure that all other surfaces of the nonhuman primate housing facilities are cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices.

### 3.125(a) REPEAT

#### **FACILITIES, GENERAL.**

There is a large gap under the fence of the Santa Cruz sheep enclosure. The gap under the fence is large enough to potentially allow the animals to leave the enclosure. The license holder indicated that some juvenile animals had left the enclosure via the gap to graze in the alleyway, but returned to the enclosure earlier this year. There are at least thirty-five sheep in this enclosure. The animals could potentially escape or predators could potentially enter the enclosure.

Repair or replace the fence to protect the animals from escape and/or injury.

#### 3.131(a) REPEAT

#### SANITATION.

Excessive animal and/or food waste is present in the shelter of the enclosure housing the single pig. The pig does

#### Inspection Report

not have a dry, clean place to lay down within the shelter.

Excessive amounts of bird feces are present along the wooden fence line of the zebu enclosure. The feces are concentrated above the hay and feeding area of the zebu. In addition, there is bird feces on the two plastic feeders sitting among the hay.

Excessive animal waste is present on the shelves within the enclosure containing three chinchillas. On one shelf the feces is piled up in one area, but on the rest of the shelves it is scattered throughout the shelf.

Failure to clean animal enclosures can lead to health hazards, pests and odors. Primary enclosures shall be cleaned and excreta and other waste shall be removed in order to prevent contamination of the animals contained therein and to minimize disease hazards, pests and odors.

This inspection and exit interview were conducted with the owner, VMO Heather Cole, and ACI Chad Moore.

The veterinary care item listed under 2.40 (b)(2) on the August 15, 2016 inspection report has been corrected.
