ANIMAL ADVENTURES OF WESTERN NY INC

Type: ROUTINE INSPECTION

Date: 08-MAR-2017

#### 3.50(a)

#### **FACILITIES, GENERAL.**

One of the rabbit enclosures housing two rabbits needs to be addressed. One link that secures the shelf is unattached which is causing the shelf to lean downward. In addition wood has been chewed exposing nails in the enclosure. This enclosure needs to be kept in good repair for the safety for the rabbits.

Correct by: March 10, 2017

#### 3.125(a)

## **FACILITIES, GENERAL.**

\*\*\* The side wire mesh panel in the coati enclosure is in disrepair with a hole in the mesh and broken wires. This hole is a big enough gap that the animal could potentially get out if it tried to. This section of mesh needs to be addressed to keep the enclosure in good repair and for the containment of the animal.

\*\*\* Sections of the wire mesh for the fox enclosure are weak and have small openings if the animals push on the mesh in those areas. The structural integrity of this enclosure needs to be checked all around to prevent any other potential escapes.

Correct by: March 10, 2017

#### 3.127(d)

#### **FACILITIES, OUTDOOR.**

\*\*\* The current perimeter fence is only 4 feet high and is not of sufficient height to keep animals contained if they are out of the primary enclosure. The foxes are housed in a primary enclosure which is accessed through an employee lock out area to prevent escapes. The New Guinea Singing Dog has been moved to another enclosure that does not have an employee lock out area so there is no secondary containment for that animal.

On Feb 23, 2017 an arctic fox escaped from the primary enclosure then was able to get out of the employee lock out area and finally escaped from the facility. The animal was recaptured approximately 5 days later. These animals
