## **Inspection Report**

CINDY FARMER-RYAN 1860 LEITMAN ROAD MOSCOW MILLS, MO 63362 Customer ID: 7966

Certificate: 43-C-0174

Site: 002

CINDY FARMER-RYAN

Type: ROUTINE INSPECTION

Date: 19-AUG-2021

3.84(a) Direct

Cleaning, sanitization, housekeeping, and pest control.

The Lemur enclosure contains an excessive amount of excreta, which is present throughout. There is no area of the floor of the enclosure that is clean, dry and free of excreta. The water container was knocked over and did not have any clean water present. The animals could not access their water without walking the contaminated area.

Animals that cannot escape their own waste can develop a range of diseases that are detrimental to their health and can cause stress and distress in the animals. Additionally, the food and water can be contaminated and become unwholesome and unpalatable which can lead to malnutrition and additional discomfort and illness.

Correct by ensuring that all enclosures are being cleaned and excreta removed on a routine basis and as often as necessary to minimize disease hazards and reduce odors.

Correct by August 21, 2021

3.131(a)

**Direct** 

Sanitation.

#### **Inspection Report**

Both enclosures containing the kangaroos and wallaby contain an excessive amount of excreta, which is present throughout. There is no visibly clean and dry location for the animals to stand and the animal must walk through the contaminated area in order to access food or water. The floor of each enclosure had excreta smeared over the entire surface. The animals had areas of their hair coat on their tails and extremities that were covered with the excreta.

Animals that cannot escape their own waste can develop a range of diseases that are detrimental to their health and can cause stress and distress in the animals. Additionally, the food and water can be contaminated and become unwholesome and unpalatable which can lead to malnutrition and additional discomfort and illness.

Correct by ensuring that all enclosures are being cleaned and excreta removed on a routine basis and as often as necessary to minimize disease hazards and reduce odors.

Correct by August 21, 2021

This inspection and exit interview were conducted with the licensee.
