

## United States Department of Agriculture Animal and Plant Health Inspection Service

TFIELDS INS-0000891922

### **Inspection Report**

LOMA LINDA UNIVERSITY

Research Affairs 24887 Taylor Street, Suite 201 LOMA LINDA, CA 92350 Customer ID: 1186

Certificate: 93-R-0006

Site: 002

LOMA LINDA UNIVERSITY

Type: ROUTINE INSPECTION

Date: 06-SEP-2023

### 2.32(b)

#### Personnel qualifications.

Following discussions with an animal caretaker at this facility, it was noted that not all animal caretakers have received training or instruction in aspects of sheep husbandry which may be encountered on an IACUC approved protocol including lambing. Failure to adequately train and instruct all animal caretakers in the husbandry needs of the species housed may negatively impact the health and well-being of the animals. Training and instruction must be made available, and the qualifications of personnel reviewed, with sufficient frequency to fulfill the research facility's responsibilities under this section and 2.31 of the Animal Welfare Act.

Correct by 09/15/2023.

### 2.38(I)(1)

#### Miscellaneous.

There was no written contingency plan available at time of this inspection. Failure to have a complete and comprehensive written contingency plan can result in lack of readiness for emergencies or disasters which could impact animal health and well-being. Research facilities must develop, document, and follow an appropriate plan to provide for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster. Additionally, all annual review documentation and training records must be made available during inspection.

Correct by 10/01/2023.

### 3.131(d)

#### Sanitation.

Inside a building used for food storage there were moderate accumulations of rodent droppings along several corners of the floor. Additionally, on the floor within an open, connected storage room of miscellaneous items there was a heavy accumulation of rodent droppings. Pests and vermin may contaminate food as well as harbor and spread diseases. A safe and effective pest control program must be established and maintained to protect the health and well-being of the animals.
