VALLEY BIOSYSTEMS

Type: FOCUSED INSPECTION

Date: 22-DEC-2025

2.33(b)(3)

Attending veterinarian and adequate veterinary care.

In October 2025 the facility did not provide timely and accurate information on problems of animal health behavior and well-being through direct and frequent communication to the veterinarians. Two non-human primates were identified with diarrhea and various treatments were initiated. The first animal was identified and treated for diarrhea on 14 Oct 25, and then Liquid (L) stools were documented through the 18th of Oct with no verified communication with the vets. The next veterinary assessment on 20 Oct 2025 summarized the difficulty of the case and changed the treatments, and euthanasia was elected due to grave prognosis within 48 hours. The second non-human primate was observed to be lethargic on 23 Oct 25 and moved from group housing for closer observation - between 25-28 Oct 25 vomiting and Liquid (L) stools were observed and the information was not verified as communicated to the vets until reassessment on 29 Oct 25. While daily observation does not have to be done by the veterinarians, a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior and well-being is conveyed to the attending veterinarian.

Correct by 1 February 2026.

This inspection and exit interview were conducted with the veterinary and management staff.
