Site: 001

Cailous Calling Animal Rescue

Type: ROUTINE INSPECTION

Date: 05-MAR-2026

2.40(a)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility is not administering vaccines for the goats and deer in accordance with their Attending Veterinarian's Program of Veterinary Care.

The most recent program of veterinary care available during the inspection prescribes a Clostridium/Tetanus vaccine "CD/T" every year for the goats and deer. The goats and deer at the facility have not received vaccines in the past year. The licensee could not recollect the last time the animals received this vaccine. Records could not be located at the facility.

Failing to follow the veterinarian's preventative care instructions for these animals could lead to preventable diseases, and is preventing the attending veterinarian from ensuring the animals' good health.

Correct by following your program of veterinary care and ensuring that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Correction date: April 5, 2026.

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility did not communicate an adult male turkey's medical issue to their attending veterinarian. The inspector observed that an adult male turkey had an enlarged crop that was hanging low. There were no feathers present on the crop. When palpated, the area felt firm and filled with liquid. The animal was taking short and slow steps.

The licensee did not communicate this to the veterinarian because the animal had this appearance for a long time and the licensee believed it to be normal for the animal.

Failing to communicate timely and accurate information on animals' health, behavior, and well-being, such as this animal's feather loss and abnormal appearance, is preventing the attending veterinarian from ensuring timely and adequate veterinary care.
