Type: ROUTINE INSPECTION
Date: 26-FEB-2026

3.150(a)

Facilities, general.

The bamboo screening covering the bottom half of the Toucan enclosure was observed with jagged and frayed edges. The bird was able to access the bamboo material and could possibly become ill if the material was ingested. In addition, the bird could become injured due to the sharp bamboo edges. The facility must ensure that enclosures are kept in good repair in order to protect the birds from injury or illness. The licensee must correct this issue.

*****Correct by March 10, 2026

3.154(b)

Environment enhancement to promote psychological well-being.

At the time of inspection, the facility was keeping the singly housed emu in an indoor space with hay for bedding, food, water, and no outdoor access for viewing other birds or the outdoors during the winter months. The facility does not provide the bird any environmental enrichment items or activities. According to the facility's Avian Enrichment Plan, the emu should have access to daily enrichment of seeing and hearing other birds and animals. Birds which do not have the opportunity to engage in species typical behavior can be negatively impacted, causing psychological distress to their health and well-being. The physical environment in primary enclosures must be enriched by materials or activities that would provide the bird with the means to express non-injurious species- typical activities.

*****Correct by March 10, 2026

3.154(c)(4)

Environment enhancement to promote psychological well-being.

At the time of inspection, USDA observed that the facility has been housing the solitary emu indoors individually during the winter months, without the ability to see or hear other birds. The facility's Avian Enrichment plan states that all birds are either group housed or they have the ability to see or hear other birds. The plan does not make any provisions for a bird when it is individually housed in the winter enclosure. Birds which are individually housed that are unable to see or hear birds of their own or compatible species can be negatively impacted regarding their health and well-being, causing unnecessary psychological distress. These birds require special attention regarding enhancement of their environment, and must be addressed on the Avian Enrichment plan. Exhibitors must develop, document, and follow a species appropriate plan for environmental enhancement to promote the psychological well being of the birds that is within industry standards and approved by the veterinarian. Additionally, this
